Technical Skills

Languages: Java, Python, JavaScript

Web Development & APIs: React.js, Spring, Spring Boot, REST APIs, Spring Data JPA, Hibernate, JWT, OAuth, Spring Security, FastAPI

Databases: PostgreSQL, MySQL

Cloud & DevOps: Azure, AWS, Docker, Kubernetes, CI/CD

Frameworks & Tools: Kafka, RabbitMQ, Redis, Postman, Maven, Git, GitHub, VS Code, IntelliJ

Concepts: Multithreading, Concurrency Control, Design Patterns, Microservices

Work Experience

PwC India

Hyderabad, India

Senior Associate (Java)

– Practice : Java Engineering / Digital & Cloud

Feb 2026 – Present

- * Completed advanced learning and internal enablement programs focused on Java, Spring Boot, Microservices, Cloud technologies, Security, and Messaging Systems.
- * Participated in technical assessments, capability evaluations, and project readiness initiatives within the Java practice.
- * Enhanced expertise in scalable backend architecture, distributed systems, and modern cloud-native application development.

Sutherland Global Services

Hyderabad, India

Full Stack Software Engineer

– Project-1: TracFone Wireless (Client: Verizon — Domain: Telecom)

Aug 2025 – Feb 2026

- * Hands-on experience in desinging, developing, and deploying **RESTful APIs** and microservices using **Java** and **Spring Boot**.
- * Written **JUnit** test cases with **Mockito** which led to Code Coverage of 90% for the project.
- * Modernized a legacy module by migrating it to microservices and upgrading **Java 7 to 21**.
- * Resolved Production Bugs by working as a team and contributed to resolving 70% of the bugs with **ELK logs** and received appreciation from the client for the same.
- * Led performance tuning and optimization initiatives to significantly improve application response time under high-load.
- * Performed **AI-driven development** using tools such as Cursor, Github Copilot.
- * Performed code reviews to ensure code quality, adherence to standards and knowledge sharing within the team.
- * Used **GitLab** for source code management and version control.
- * Leveraged **Jenkins CI/CD** pipelines for automated build and deployment.
- * Worked with business stakeholders to gather requirements and resolve issues.
- * Managed release activities including deployment planning and production rollout.
- * Collaborated with cross-functional teams for application releases and production support.

– Project-1: UDAP Portal (Client: Humana – Domain: Healthcare)

Dec 2024 – July 2025

- * Led a team in **full-stack development** of a platform from scratch for client using **Java** and **Reactjs**, delivering the solution end-to-end while following **Agile methodology**.
- * Led the backend implementation using **Spring Boot 3, Hibernate, and Java 17**, designed and delivered **RESTful APIs** and secured using **OAuth2** and **Spring Security**, reducing security vulnerabilities by 50%.
- * Integrated **React.js** frontend with **Azure AD** using MSAL.js and **OAuth 2.0** enabling **SSO** which reduced login errors by 95% via secure token lifecycle management.
- * Developed a **React** authorization framework using JSON-based roles to manage CRUD permissions, reducing policy maintenance by 70%.
- * Implemented unit testing using **JUnit** and **Mockito**, ensuring comprehensive test coverage with over 90% code coverage and identifying critical bugs.

– Project-2: Nabu (Product Development)

Feb 2022 – Nov 2024

- * Developed and enhanced **RESTful APIs** using **Java & Spring Boot** to support workflows, resulting in 25% faster feature delivery for new data ingestion pipelines and metadata transformations.
- * Engineered a core workflow execution engine using **multithreading** and **concurrency control**, with **thread pool** and **RabbitMQ** for messaging, efficiently handling 10,000+ daily executions.
- * Designed and implemented an **RPC-based** communication system between **microservices** using **Java** and **RabbitMQ** to enable real-time validation in Data Curation pipelines.
- * Collaborated with a team of 3 to upgrade the project from Java 8 to **Java 17**.
- * Optimized implementations leveraging **Data Structures** such as the Collection framework to enhance performance and efficiency.
- * Optimized **complex PostgreSQL queries** used in monitoring dashboards (Nabu), reducing load times by 50%.
- * Contributed to **CI/CD pipeline automation** using **AWS CodePipeline** and **CodeBuild** to deploy a PoC on **Elastic Beanstalk**, reducing manual steps and improving deployment reliability by 40%.
- * Identified and patched 15 critical **security vulnerabilities** in the product, resulting in 40% increase in system stability and reducing downtime by 25%.

Education

CVR College of Engineering
B.Tech in Computer Science

Hyderabad
Aug 2018 – May 2022
